No GPS? No problem! Researchers test new and improved systems to track drones

BY ALAN BOYLE (HTTPS://WWW.GEEKWIRE.COM/AUTHOR/ALANBOYLE/) on August 15, 2018 at 4:28 pm

The University of Washington's Cory Cantey and Karine Chen prepare a drone nicknamed Papaya for flight at the Columbia Gorge Regional Airport. (UW Autonomous Flight Systems Laboratory Photo)

As more and more drones fill the skies, increasingly sophisticated methods will be required to track them under increasingly challenging conditions. How will they navigate if they lose touch with the Global Positioning System? How will authorities know who to call if a drone goes wrong?

(https://twitter.com/intent/tweet?url=https%3A%2F%2Fwww.geekwire.com%2F2018%2Fno-gps-no-problem-researchers-test-new-and-improved-systems-to-track-drones%2F&text=No+GPS%3F+No+problem%3F+Researchers+test+new+and+improved+systems+to+track+drones%3F) (https://www.facebook.com/sharer/sharer.php?u=https%3A%2F%2Fwww.geekwire.com%2F2018%2Fno-gps-no-problem-researchers-test-new-and-improved-systems-to-track-drones%2F) (https://www.linkedin.com/shareArticle?mini=true&url=https%3A%2F%2Fwww.geekwire.com%2F2018%2Fno-gps-no-problem-researchers-test-new-and-improved-systems-to-track-drones%2F) (https://www.stumbleupon.com/submit?url=https%3A%2F%2Fwww.geekwire.com%2F2018%2Fno-gps-no-problem-researchers-test-new-and-improved-systems-to-track-drones%2F)

First, about that GPS issue ...

Antenna tracking system for drones

f	 (https://twitter.com/intent/tweet?url=https%3A%2F%2Ffruits-2-game.herokuapp.com)	 (https://www.facebook.com/sharer/sharer.php?u=https%3A%2F%2Ffruits-2-game.herokuapp.com)	 (mailto:fruits-2-game@protonmail.com)
---	--	--	---

astronautics and the director of the Autonomous Flight Systems Laboratory (<https://www.aa.washington.edu/research/afsl>), said today in a news release (<https://www.washington.edu/news/2018/08/15/flying-blind/>).

Lum and his team have developed a system that's designed to use a backup navigation technique if GPS satellite links fail. They set up a large ground-based antenna array that can pick up GPS signals from a transponder on a drone, and triangulate on the signals to determine and broadcast the drone's position.

"We're just modifying the autopilot onboard the aircraft," Lum explained. "Instead of using GPS information to navigate, it's listening to this message coming from the ground to figure out where it is."

The antenna array was put to the test on June 12 at the Columbia Gorge Regional Airport, which is on the Washington state side of the Columbia River near The Dalles, Ore. A test drone successfully made its way along a 1.25-mile flight path without the use of GPS, with only one deviation that was due to strong winds.

The team's next step is to work with T-Mobile to tweak the navigation system so that it works with cellphone towers.

"T-Mobile has got that black magic to know where a phone is located anywhere within their antenna array," Lum said. "So instead of being stuck in the Columbia Gorge region, our drones could use the cell network to get that location information anywhere there is cell coverage. It's beautiful."

Eventually, the team aims to incorporate the navigation system into a drone network to transport medical supplies around rural areas of Washington state.

Built-in ID system for drones  <https://twitter.com/afsl>  <https://www.facebook.com/afsl>  <https://www.linkedin.com/company/afsl>  afsl@uw.edu  <https://www.washington.edu/news/2018/08/15/flying-blind/>

Team members inspect an Intel Falcon 8+ commercial drone during an Open Drone ID and UAS Integrated Pilot Program event in the Choctaw Nation, outside Durant, Okla. The drone is equipped with thermal sensors for nighttime operations.(Intel Photo)

"We see drones as an extension of smart farming technology. Drones provide that next step toward robotics and automation," USA Today

Oklahoma's project is one of 10 experiments approved earlier this year (<https://www.geekwire.com/2018/10-localities-win-federal-approval-push-limits-drones-amazons-left/>) by the U.S. Department of Transportation to expand the frontiers for drone operations.

Intel is leading the workgroup that's developing Open Drone ID to become an ASTM-approved, open-source global standard. If it's implemented, every drone will broadcast a unique ID as well as its location, direction, altitude, speed, model, base location and other data.

What's next for the innovation economy?

Find out at The GeekWire Summit (<https://www.geekwire.com/summit>), taking place on Oct. 1-3, 2018 in Seattle, one of the country's premier technology conferences, bringing together more than 900 innovators and tech leaders together for an immersive two-day conference.

This year's lineup features the CEO's of Boeing, The Gates Foundation, Ring, eBay and more. Early bird rates end soon, grab your tickets today.
