Helen,

Can we setup a time to discuss how to address some of these shortcomings and take corrective action.

-Chris

Subject: Survey results from EH&S

Hello Chris, thanks for meeting with me yesterday to go over the lab safety checklist. I discussed my visit a bit with my supervisor (Tracy Harvey) who recommended I suggest having an SOP for soldering, so attached are a couple of resources which may help with creating one of those.

Also, the report is completed – here's a message with a link to that. Thanks for your obvious attention to keeping your lab organized and safe to do work in. Best regards,
John Kushleika , EH&S

--

The survey report is completed and available for your review. Provided below is a link to our online 'dashboard,' which details any deficiencies identified, and provides boxes for your responses/ dates addressed.

<https://labsurvey.ehs.washington.edu/index.php>

The link is accessible to you and to your Chemical Hygiene Officer. A PDF of the report can be accessed via the dashboard, which will include any photographs that were included as part of the survey.

For any deficiencies identified in the survey report, please provide a response within 30 calendar days indicating when the deficiencies were corrected. EH&S recognizes that some deficiencies may require longer than 30 days to correct; in these cases, a response indicating the plan for making corrections is requested. The electronic dashboard will close after 30 days. Corrections made after that date should be submitted as a PDF report via campus mail to Tracy Harvey, Box 354400, or emailed to her at tdy@uw.edu.

For any additional questions regarding this report, please don't hesitate to contact me.
